- Prepared detailed reports on updates to project specifications, progress, identified conflicts and team activities
- Evaluated employee skills and knowledge regularly, providing hands-on training and mentoring to individuals with lagging skills.

KEY PROJECTS

- **Projects Handling in Hexaware Technologies Ltd.**

Project Description: AXA ART merged with AXA XL, as a merger process they started a program consolidate and move AXA ART applications / Server's suite to XL datacenter on Azure platform. It involves working/collaborating with cloud team and application team, security team, procurement team, DBA's for analysis, planning and management, procurement and deployment of application teams. Also, CICD pipeline implementation on all the applications which was not in place in earlier datacenter.

AXA XL Datacenter Movement
Technology: Convert all the application on. Net 4.8 using VS 2019 and Integrate with Azure Cloud (PAAS)

Responsibility: Assessing migration feasibility, identifying dependencies and overcoming obstacles for all existing application.

Project Description: These services work for Inbound and outbound concept and process data based on the requirement. Inbound services provide the flexibility to manage data from multiple external sources to process inside main core policy system Artist. Servicers receive minimal information for external system then perform business validation and add and calculate business field's data and process all information automatically till respective status for new business as well as existing business. Outbound services provide the flexibility to retrieve data from main core policy system Artist and pass to external system to process data in respective requirement.

Dynamic Integration Services
Technology: .Net 4.0 frameworks, SQL Server 2016 with Web API methods and Windows service.

Responsibility: Ensure that all parts of the technical design are correctly incorporated. Define the development tools and environment. Resolve technical issues. Handle Project estimation, planning activities, Client communication as well resource management.

AXA Art - Artist (PAS)

Technology: COTS Product (.Net 2.0 frameworks, SQL Server 2016 with Web Services).

Key Deliverables: Checking of data inconsistency and providing fixes. Creating New Product Structure, Business Extension to New Office, Addition of MGA Functionality, Created various reports in SSRS as per customer requirements, GDPR Implementation, Data Cleanup.

Project Description: AXA Art is an expert Fine Art insurer provider that offers high standard insurance coverage for multiple classes of private collections like fine art, collectibles and exhibitions. The Product is to support client's Policy Administration System and do enhancements based on the requirements.

Responsibilities: Study current business practices & requirements and suggest viable solutions to meet business requirements. Translate requirements into a technical architecture and an implementation plan.
Provide test scenarios and test data for execution. Handling Project estimation, planning activities as well resource management.

Underwriting Toolbox

Technology: .Net 4 using MVC frameworks, jQuery, SQL Server.

Project Description: Underwriting toolbox (UWTB) is web-based application that provide flexibility to create multiple quotes for the users based on different business rules like Products, Risk, Pricing etc.

Responsibilities: Requirement Gathering, Analysis, Design and implementation of the application, Resolving Technical queries to the team and get query clarifications from client.

GRASP

Technology: .Net 3.5 using MVC frameworks, jQuery, SQL Server and SSIS.

Project Description: GRASP is a sophisticated web-based risk assessment and management application that's allowing users to track risk assessment survey, manage mitigating actions, conduct trend analysis and run management reports across their risk profile.

Responsibilities: Requirement Gathering, Analysis, Design and implementation of the application, Resolving Technical queries to the team and get query clarifications from client.

B2B Portal

Technology: .Net 3.5 using MVC frameworks, WCF services and Ajax.

Project Description: Portal is a one stop shop for all stationery needs of B2B consumers. These include corporate customers, traders, dealers, resellers and group companies. Portal allows B2B customers to register themselves on the portal and create accounts. Once the administration and back office personnel verify the customer's creditability the customers would be allowed transacting and placing orders through the portal.

Responsibilities: Responsible to manage new enhancement, Support, Team management as well as work with team in development and design.

Profitability **Technology:** ASP.Net using Telerik controls and SQL Server 2008 SSIS and SSRS.	• **Projects Handled in Patni Computer Systems Ltd.** **Project Description:** Application has two part 1st Sql server SSIS package with daily and monthly jobs and 2nd part have UI. Application helps to provide client to check global statistic of product sale and forecast to production team to focus of largest selling products and patterns. **Responsibilities**: Worked as a developer and Module Lead. Understand Client requirement and completed the development.
TriSept Solution **Technology**: Web client software factory using MVP pattern with. Net3.5 framework using Web Client Software Factory, WCF services and Ajax Framework.	• **Projects Handled in Blue Star InfoTech Ltd.** **Project Description**: This Product is purely base on configuration based on the uses. User can have multiple types like online user vendor and call center support. This solution has multiple modules like (Search, Availability, Booking, Registration and Reservation conformation and rescheduled reservation with different criteria). Availability of air, hotels and rented cars information comes from GDS system using WCF services and filtered with vender wise. **Responsibilities:** Worked as a developer and Module Lead. Understand Client requirement and completed the development.
ARCIL **Technology**: ASP.Net, C#.Net, Java Script, SQL Server 2005, Workflow and Alchemy data management	• **Projects Handled in Rincon India Solutions Pvt. Ltd.** **Project Description**: The activities involved in an ARCIL acquisition include gathering loan data from the banks, valuation of the NPA, offering a price for purchase, etc. At the time ARCIL undertakings were being carried out without being captured in a system for referrals or verifications. They wished to completely automate their business. An MIS was envisioned which would allow their users to capture case related information from the initial through to the final stages of an ARCIL acquisition. **Responsibilities**: Worked as a developer, Developed the application logic and testing and part of Client communication.
Fax Stamping	**Project Description**: Designed and developed for Intranet users for Fax Process. It keeps track of Fax received and

Technology: .Net 2.0, SQL Server 2005, Workflow and Right Fax.

stamps a unique number on fax received. As soon as fax is received process is generated in workflow which stamps the fax with unique number, date and other details. It also gives option to user to validate the fax and keeps record of the user who validated the fax for audit purpose.

Responsibilities: Worked as a developer, Developed the application logic and testing and part of Client communication.

Project Description: Prior to implementing the system SE's were not submitted as required and were submitted very late leaving no option for approvers to decide apart from approving it. So now since there is automated system everyone is bound to fill the SE's on time else it is reflected in SE that it is a Post-Facto i.e. submitted late. Apart from this there are many levels of approvals and the calculation logic on the.

Responsibilities: Worked as a developer, Developed the application logic and testing and part of Client communication.

Significant Expenditure

Technology: ASP.Net, C#.Net, Java Script SQL Server 2005 and Workflow.
